

International Mapping solutions

Is your company operating in countries outside Australia, and you want a common system to view locations, territories and information? If this is an issue to you, Spectrum has come up with an answer that is already proven with one international client operating over 30+ countries.

We have found that using a combination of our own GIS for storing and manipulating data, and Mango Maps, we can produce a worldwide system to meet the requirements of most franchise systems as far as territory establishment, mapping to show potential franchisees, and the issue of a “single point of truth”, where all involved are looking at the same information.

Mango Maps gives us the ability to issue different level passwords to protect the data, and give you the security you feel is necessary so you can share the information with different levels of staff across the world.

Quote from F45 Training

We have been using a combination of a GIS system and Mango Maps for our global expansion, and find this to be a cost effective system we can use, as we now operate in over 30 different countries world wide with 900+ franchises. We can grant a territory we know meets our criteria, and can keep an up to date record and mapping as the new sites are opened. Highly recommended if you want to keep control of your world-wide expansion.

Luke Armstrong, Global Sales Director, F45 Training

Benefits

- Cloud based solution
- View all your global territories in one place
- Share territory boundaries with potential franchises
- Single source of information
- Point and click user-friendly interface
